

Controlled steelwork delivery from drawings to installation.

OP Steel supports contractors, fabricators and project teams with steelwork site services, engineering support and steel installation delivered with technical precision and commercial awareness. Complete steel packages are available where clients need one accountable route.

SITE SERVICES

Controlled installation on live projects.

ENGINEERING & DETAILING

Buildable information aligned with real site delivery.

COMPLETE PACKAGES

Integrated delivery where required.

What we do

01 Site Services

Steel erectors, fitters, supervisors and foremen delivering controlled site installation.

- primary and secondary steelwork
- metalwork installation
- sequencing support
- project-based site support

02 Engineering & Detailing

Practical engineering support and detailing aligned with how steelwork is fabricated and installed.

- steel detailing and drawings
- BIM coordination
- buildability reviews
- technical support during delivery

03 Complete Steel Packages

An additional capability where clients need one accountable route from engineering through to installation.

- package definition
- fabrication management
- procurement and logistics
- handover documentation

Where OP Steel adds value

We help clients reduce the gaps that create delays, rework and commercial exposure.

- coordination gaps between drawing office, fabrication and site
- unclear interfaces and avoidable rework
- late issue capture and weak records
- programme disruption and margin exposure

Leadership credibility

Led by steelwork professionals with experience across international steel construction, EPC/EPCM project environments, BIM coordination and erection planning, commercial/contracts management, fabrication-yard engineering and project recovery.

SELECTED EXPERIENCE

World Trade Center Tower 3 | Google data centre structural steel package | Transamerica Pyramid retrofit | Northvolt Giga-Factory | Shah Deniz | BP Clair
